07 WRAP-UP

EU GREEN DEAL

European Climate Law aimed at making the EU climate neutral by 2050.

AREAS OF FOCUS

ZERO POLLUTION

HIGH-QUALITY
FOOD

AFFORDABLE
SECURE ENERGY

SMARTER
TRANSPORT

PROBLEM

Data is critical to measuring success

Available data is complex and widely dispersed

Tracking goals is challenging

No tools to match detailed data to high level targets

SOLUTION

Single platform

Consolidate data across numerous sources

Compare up-to-date data to targets

Clear, impactful and actionable visualizations

REQUIREMENTS

DESIGNED FOR
EU COMMISSIONERS

NO SELF
REGISTRATION

CUSTOMIZABLE
DASHBOARDS

PERSONAS

EXTENSIBLE

Focus: Air Pollution prototype with extensibility to accommodate other areas in future

DATA SOURCES WE'RE INGESTING

SATELLITE IMAGES

Via REST requests with
NetCDF file payloads.
Hourly images for each
pollutant.

REGION MAP POLYGONS

GeoPandas shape file payloads.
4 regional hierarchies.

AIR QUALITY SENSOR DATA

Via REST requests with CSV
payloads. 5000 stations of
hourly data.

POPULATION BY REGION

Via REST requests with CSV
payloads.

EMISSIONS BY SECTOR

Via SPARQL requests with
RDF payloads.
Annual output for all sectors
and all pollutants.

AIR QUALITY GOALS

Via REST requests with
CSV payloads.
For all pollutants.

LIVE DEMO

DESIGN

EXTENSIBLE DESIGN

MODULAR UI

A graphical interface which uses configurable data tiles.

SIMPLE APIs

APIs which abstract away the underlying data structures.

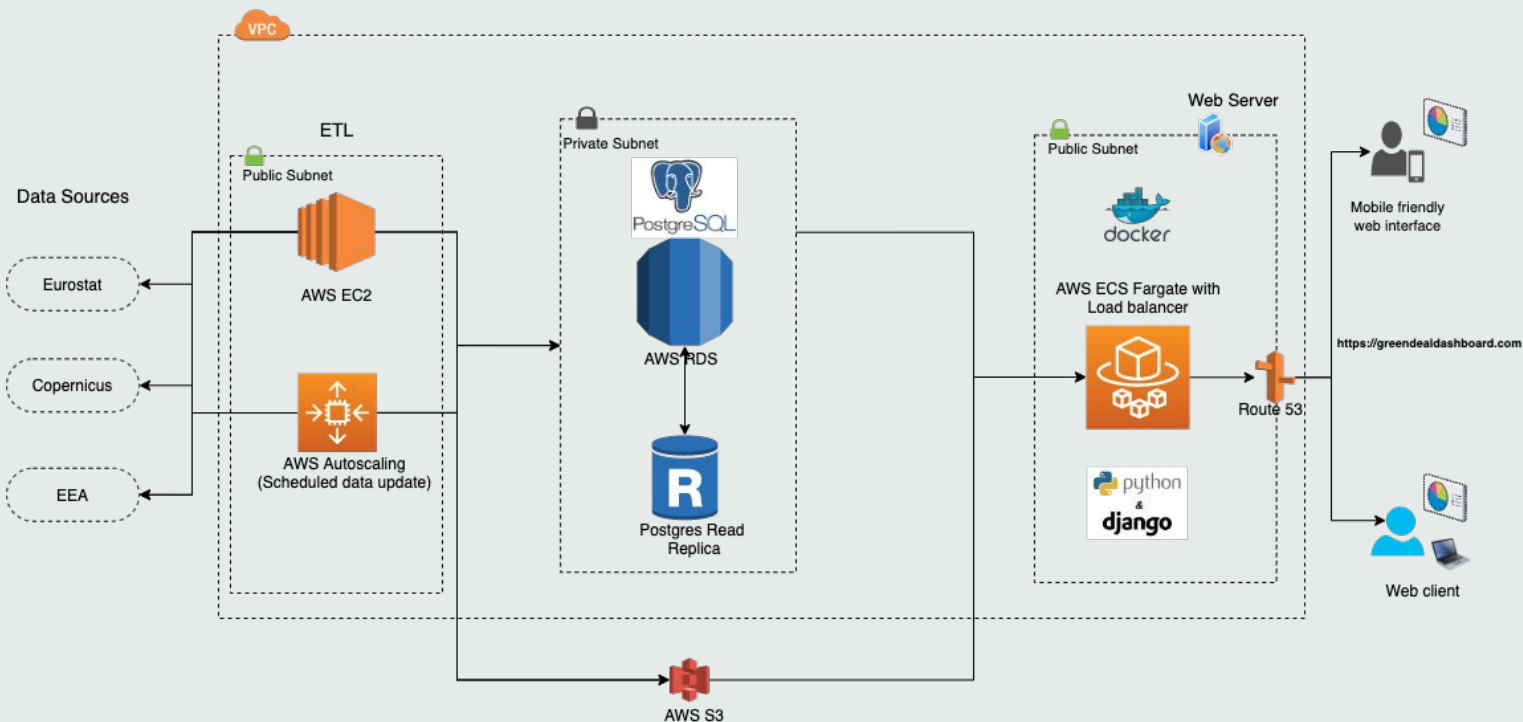

ABSTRACT CLASSES

Abstract classes with versatility to adapt to various domains and data sources.

TECHNICAL ARCHITECTURE

EU Green Deal Reporting Technical stack

STRETCH GOALS

DATA SOURCES

Additionally added sectors dashboard, bubble plot for goals and population.

EXTERNAL API

Added support for an external API.

TESTING

81% code coverage which excludes view code.

Documentation

Used Sphinx tool to generate documents.

LESSONS LEARNED

LOGIC IS HARD

Deciding is harder than doing.

DATA ZOO

Companies aren't always the best for data discipline, and Governments aren't either.

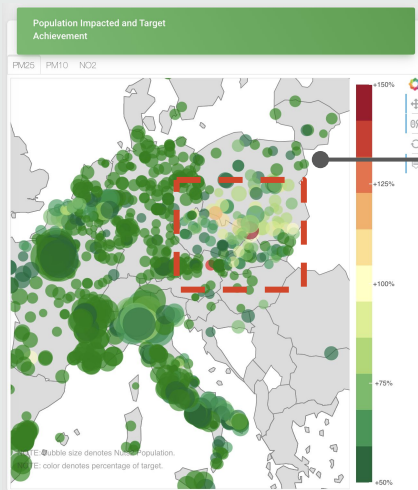

UX HARD TO BUILD

Meaningful visualizations are easy to use but very hard to design.

INSIGHTS

COVID 19

From an initial look at air quality trends, Covid seems to be contributing to reduced PM 2.5 levels and Ozone levels.

POLAND FIRES

The impact of recent fires in Poland can be seen from high-concentrations of PM2.5 and PM10 readings in regional views.

EMISSION IMPROVEMENTS

The EU has dramatically reduced emissions from all air pollutants that we report on over the past 20 years.

NEXT STEPS... PRESENTING IN BRUSSELS?

Thanks to our customer recommendation, we were inspired to apply to the Datathon program organized by the Publications Office of the European Union. If selected, we will be presenting our project at the European Week of Regions and Cities in Brussels in October.
